

How do you feel about your HIV treatment?

Advanced science means there are over 30 antiretroviral drugs on the market today.

However, for most people living with HIV, treatment is decided on cost rather than patient convenience or minimising side-effects. Using unwarranted patents, many pharmaceutical companies keep prices as high as they can get away with. This means optimal drugs are out of reach for many people living with HIV.

Help us expose treatment inequality and help to Make Medicines Affordable.

Happy or sad with your HIV treatment?

Add YOUR picture at the Treatment Networking Zone Booth 605, in the Global Village, this Thursday 21 July. Whether you are happy or sad with your treatment - show solidarity for other people living with HIV and add your picture to support our campaign.

End Treatment Inequality #EndTxInequality
